"THE ART OF WAR"

HAIL TO THE RTM
HAIL TO IF AND ALL OTHER MEMBER OF THIS GLOBAL SOCIETY
Peace be upon you FOLKS
At first I prefer to write an introduction

Introduction
For two months, that I am here . In this period I have learned a lot from you. I had not seen a gathering of this magnitude. Before I came here I had fun playing with chart and drawing my analysis. Andicators and all other painting tools .
But now I believe that a blind man could see the light if and only if it is touched. After pass the following topics

RBD,DBR
CP
SUPPLY AND DEMAND
FTR,FTB,...
I intend to continue my trading journey here . I will be starting what an ENGULF means. But first I would like to infrastructure to topic.
Before we begin I would like to emphasize that I am a novice and this is just what I've seen in this two month. So all the topics that I write can be misleading. But all my efforts is that I can prove things to myself. I thank all those who have helped me in understanding. And at the end, I apologize for the lack of English language.

The smallest member of this community
Salivan

First, I will address several questions.
1-What is the market?
2-Who will drive the market ?
3-What is their purpose?
4-Why RTM ?
5- What are our weapons ?
6-How a tool works?
7-Why it works?

Now I try to answer these questions in my point of view .
1-What is the market ?

I think the market is a jungle .there are the number of bull ,the bears, the dogs, the lambs and the pigs in this jungle that they fight to each other's.

2-who will drive the Market ?

In my idea the dogs .they called them Big Boys , Smart Money , IT s .
Dogs are loyal to their commitments. And I think all the things that one need in this jungle is loyalty to its commitments. So that They eventually wins.

3-what is their purpose ?

What are their obligations ? They need to empty the pockets of others either bulls or bears .
4- why RTM ?
For me , because RTM showed me in what areas ,the moderator of this jungle is waiting for it's prey to hunt them and it is not important if they are bear or bull or lamb or pigs. Here, kill or be killed.
5-What are our weapons ?
There are a lot of armaments in this castle.
SUPPLY & DEMAND,RBD,DBR,CP,ENGULF,FO,3DERIVE,QUASIMODO,CAN-CAN,FLAGS and some others.

6-How a tool works ?
In the videos, Mr. IF has told us how a tool works and how we can use them,
also the masters wrote some articles for us, that I call all this collection, the art of war .
7-why it works ?
This is the most important part .because the I think it's more important why a tool work that what it works .
So that I start with RBD,DBR s.
What is RBD ,DBR ???
RALLY BASE DROP :
Generally We call it supply . it's The resistance against rising prices.it Contains the worst buyers and also some decision points that sellers exceeds buyers . so that if any decision made there that price is too expensive we expect in future the big boys can grab some orders from unsuspecting traders or the worst buyers here again . so that this zone is full of DPs. I think all the market are DP s.in this case Some decisions have been taken to reduce the price . but why they think price is here too expensive ??
Psychologically, people tend to repeat their decisions in life the decisions that altered the course of prices in general are important to us. So that if the price is reduced with these decisions we call this area that the decision have been made in it, supply (RBD).and the same applies to regional demand(DBR).some decision have been taken that price is too cheap so the

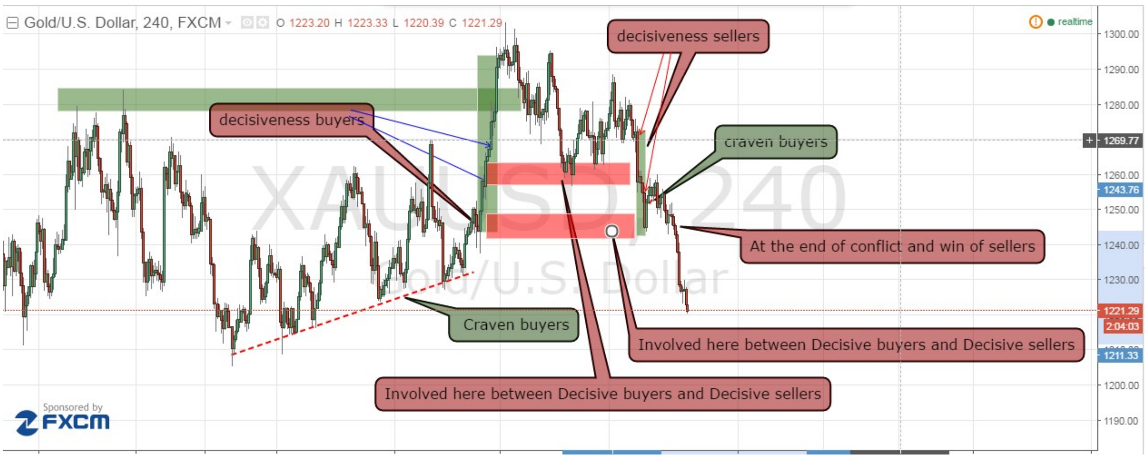

big boys can grab some orders from the novice traders like me in that area in future again.in this case some decision have been taken to rally the price and support it.so This set of decisions in that area, that the price is cheap cause a DBR for us that we call it DEMAND area .
But the quality of development of these areas are important to us. How and in what form they are formed is very important. Do they have a firm decision or indecision has occurred in past ??these are also important .
Another issue is approaching the prices to these areas.so that if price approaching to a fresh area as a compression we can expect that area to work again as before. But if price approaching the area Strictly we should wait and use other weapons .
I think all the market is fear and greed. Those CPs represents the fear. And high volatility is indicate the greed . so that in greed we should pay more attention to other weapons why the opponent does not fear losing and very assertive in approaching our privacy. our privacy is our castle , where we already have seen fighters failure. If you look into the real world you will see that the losers always fear at The places where they have failed there .
So this is a psychological reason. This forest is a mirror of the behavior of its residents.

After a number of failed raid to break up the castle If they want to break the barrier must gather more power so they go down to reinvigoratewe, call it deep pullbacks. This is what we see in the real world. Castle also been hitting so that it's too weak for the next attack and we call this consumptions of the orders. Weakness or strength of the castle can be determined from something that we call it SUPPLY & DEMAND. I want to say that I see the difference between SUPPLY with RBD and DEMAND with DBR . I will explain the reason, In future. Therefore the more attacking to a castle cause it weaker and in the next raid, it may be rejected by the stronger amount of attackers.
This how I read the story .
After that we have some other weapons to determine whether a castle resistance against the attacks or not ?
Something that called CP. Compression is a kind of fear. But sometimes this is fear that gives courage. My fear is what gives me the courage. Again,

these two issues are related to underpin our castle .A new castle usually resistance against the fear of the attackers .

Retreat or recess of warriors in the way up toapproaching the castle is a sign that they fear . After reaching the Castle The first warrior who fail ,break the morale of the fighters . On the other hand if the army on the way forward reach to a coward Front ,Of course, it will be faster to defeat it .

now what is the difference between SUPPLY and RBD ?
Imagine we want to build a fortress. a fortress which contains many castle that Each castle has a flag . in my idea even a strong fortress on a loose ground cannot withstand the attacks .so that I consider supply as a ground

as the foundation of the fortress and consider the fortress as RBD. vice versa for DEMAND and DBR too. In the RBD the upper castle in this case the extreme edge of the fortress is SUPPLY area that resistance against the Attackers.

The question that must be asked here is that Why this Classifications are important for me ?

If attackers can infiltrate a castle after a while they vivify their power then march in the same direction of the seepage to approach another castle on their way . how much to be returning to shore power depends on the strength of the fortress collapsed, that RTM call it as ENGULF .

I have another question:

Who make this ENGULF ?

No one in particular , The only things that make penetration occurs are the fort foundation strength and the strength of the invaders blows.

The question is whether the big boy makes an engulf or all attackers make it?

Or do engulf pre-made and big boy sees it and then decide for it ?

This question also are right and logical .

In my idea all these issues together, provides the ENGULF :

A.

The weakness of the land on which the castle was established on it . In this case SUPPLY & DEMAND (Combination of fortresses that collapsed earlier)

B.

Amount of fresh attackers and how long it takes to accumulating fresh power to continue their way .

C.

BIG BOYS (heroes) are also analysis the war and novices are do it too .

I will try to prove and also improve this story .in the next part of this article I will try to anatomize the topic engulf .

END OF PART 1.

Any comments would be really appreciated

THE ART OF WAR
PART2

In the previous section PART 1 I tried to tell clip of a battle.
A war in which fighters are trying to conquer the castles in the air.
Decisions should be taken to conquer a castle. Places where decisions are taken are important for us. The think tanks! If you want to destroy a castle ,at first penetrate to the think tanks .
Before conquering a castle it should be breached. We as a trader there is no matter if a fortress conquered by bulls or bears . We're just looking to make a profit in this war and wherever a permeation occurs we accompany the fighters. So we want to be loyal to our rules, not the rules of the war. In the meantime, there are signs to those who deal with THE RTM ART OF WAR.
WHAT IS AN ENGULF ?
The most important question in RTM training camp. First of all I want to describe a hypothetical battle.
Suppose that an army is advancing to conquer the enemy positions. Enemy positions include a number of castles that formed a fortress. To conquer a fortress its FLAG should be conquer. As soon as the flag of first castle was removed we must ask ourselves a few questions.
1-
What is the position of the conquered castle?
2-
Where they come from and where are they now?
3-
Is there a nearby castle, which is already under attack?

4-
After the conquest of the castle and down the old flag, did the attackers have raised their flag?
5-
Where is the nearest room to think and also where is next think tank that should be conquered?
Answer all these questions will help us to be able to properly read the map.
And all this story is only to know that, the forces after pulling down the enemy's flag ,retreat to rest and gather strength again to reach the goal.
The aim is to flag down the next summit.
Therefore , THE ENGULF is a sign that tell us in advance there is a goal that has not been realized.
In next part I try to make some images from the different battlefield.
END OF PART 2

WITH REGARDS

HI RTM
HI HEROS
in this part i want to investigate some Concepts of war
i think i forgot in last part to write something about FO and ENG .
before writing that i want to emphasis that i am not sure if i am right or wrong with this concepts .so that if one of you correct me i would be thankful
so i am start :

In my opinion there is no difference between the FO & ENG .Both of them are kinds of some efforts.one in right place ,another in wrong place.
but i my self believe that both of them are useful .why ???
again imagine the story of the war .
some attackers try to pulling down a FL of a castle ,They damage to the castle and this is useful for us because now we know that the castle is weaker than before .
but generally FO is a kind of ENG for our future . i mean that all FOs will turn to ENG after absorb more power .
we just should find the THINK TANKS . in this places BIG BOYS think about next castle and next target .last decision that made there is so important for us . and how they made the decision is also important ,in fear or with courage .

So that ENG is just an unrealized goal.

Hope it help

any comments would be really appreciated

I POSTED THIS HW IN DT's thread the name "ENGULF OR FO ???"
but i like to post this here again so that i think it can be another clip of war
Again i emphasis that i am not 100% that i am right i just investigate in the chart and in this 2 months i find out this story by the of IF and other masters of this global society.

the first set of charts comprise of the WEEKLY,4H,1H nad 15 min TFs
Weekly :

4H TF :

i look at this 3 point if i can have an entry in LTFs

POINT 1:

1H TF

sorry my platform don't load the data in 15 tf at the history of the chart i was forced to use 30 MIN TF instead of 15 MIN TF .

In this TF i look for another short position ,after all TT s i look for PA if i can fiil my final orders .

POINT 2 :

4H TF to look at the whole story

how i read the chart here :

we have a CP to a proper DEMAND ZONE and this is a good signal for Reverse .

in the CP paz we act the whole CP as a pole and in this case the upper consumed supply as a FL (FLAG BASE)

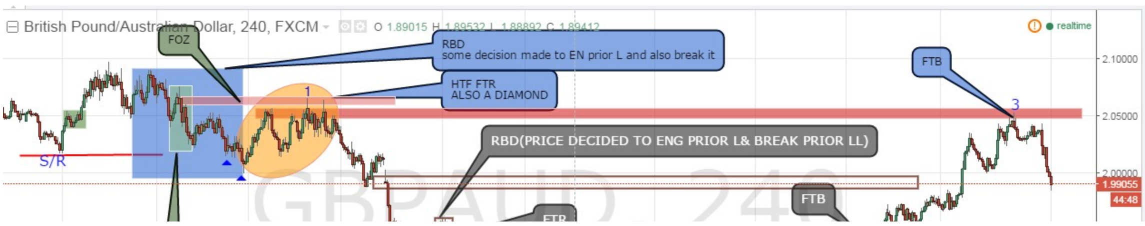

in an ideal CP if last consumed supply be ENGULFED then we can expect that price can cut through the all CP PAZ to the prior untested zone .

i look at 1H TF if i can find any PA for join the battle .

POINT 3 :

LTF :

TO LOOK AT PA IN POINT 3

ANY COMMENTS ARE WELCOME

  NEXT ONE IS GBPUSD THAT I POSTED IT IN DT's thread "ENGULF OR A FAKEOUT ??"

  again i think this is good for our thread too .
  i want to say that this not my room ,this thread is ours. so that i want the others and also the masters if they come here and correct me i would be appreciated alot .
  TRADERS HELP TRADERS .
  we should help each other to make this society alive and don't let the masters and the moderator "@IF " be disappointed in their efforts for us .
  so that i hope i can pay my debt to the RTM global society .
  hope we join each other and once again make this committee more majestic and royal .
  thank you RTM
  The smallest part of this society
  SALIVAN

  This one is GBPUSD that i did it in live account a week ago .
  i believe that a trader must act how he/she can grabs some orders from unsuspecting traders .
  i try this way in my journey .
  fist chart is my prediction on DAILY TF :

after a while price reached to mu zone FO zone and i had an TT . but i know that my entry was not enough good but acceptable.

now i go to LTF if i can find any PA signal for an other entry
In 1H TF we can se a nice CP to the FO zone where big boys orders have potential to be filled :

in 15MIN TF i look more for exact entry :

Next instance is EUR/GBP from weekly TF to 15 MIN in three points of the chart i try to investigating PA.
I love these scenarios wherever you are in the extreme edge of a supply look for TT ,wherever you are in the middle edge look for PA .
BUT AT FIRST I LOOK AT THOSE AREAS THAT A LOT OF WAR OCCURRED BEFORE

Let start with weekly TF
Outlook :

Closer view:

I go to LTF like daily if i can some PA ZONE for some short entries

Outlook :

Closer view:

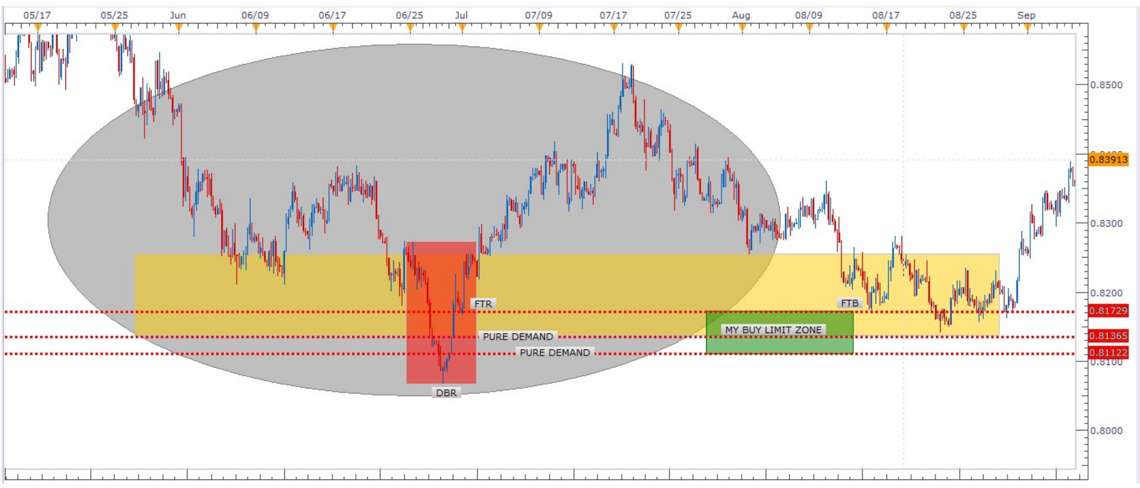

i lost an important area in my collection but i do it try to chew it here

going to LTF IN this yellow area to find PROPER ZONE
BUT MY Trading view platform could n't load the data in LTF and i have had to use another plat form for loding more history for me
sorry if this one is not enough clear
you can see that my first buy entry hit and price could n't hit the others .

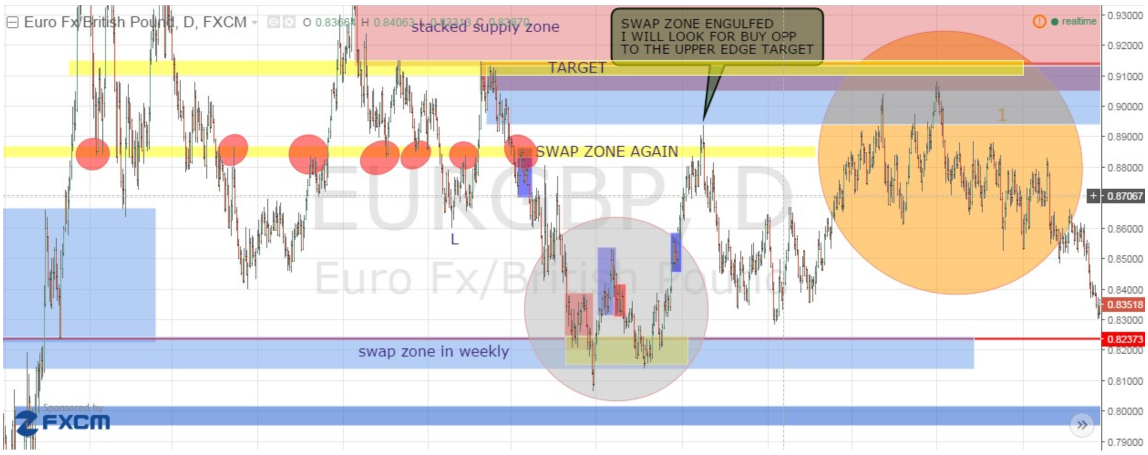

NOW

coming back to DAILY TF to set my TARGET :

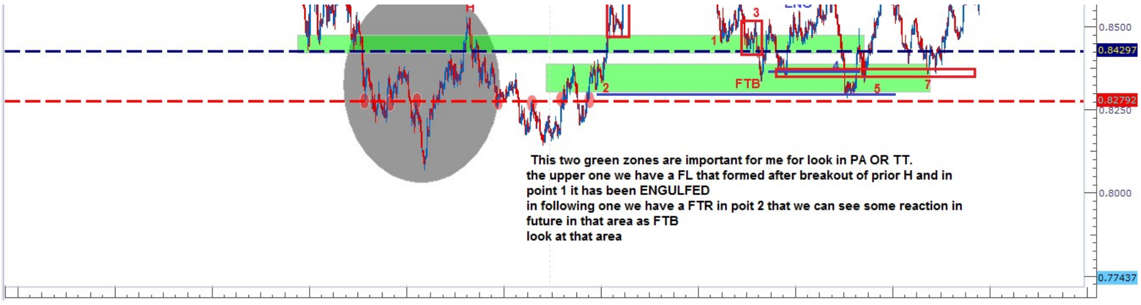

After that the target hit i see that another SWAP ZONE engulfed by price so that i look for buy opp to the upper edge nearby another swap zone

after this i look in LTF for PAZ BUY OPP ZONE

i think this is enough for this HW because the num of PICs raised and RTM don't let me too attach more .
i try to investigate major point 1,2,3 in next posts

WOW
it about 4 H that i look for this small area but I'm still not reach to where I
  wanted to start.

any comment would be really appreciated

hi again
Read the previous section and i want to continue it .
now again i put a HTF chart to know that where is our place of research exactly .

in point 1 :

i want to find out some PA in this area

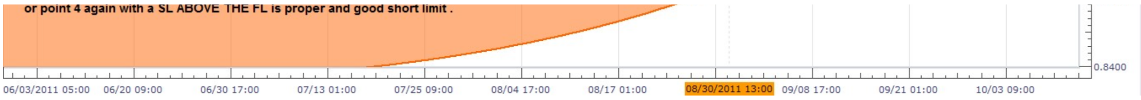

at first in daily TF then go to lower one to find a proper R/R

In daily TF we can see that all details are in the chart

going to LTF 4H :

NEXT CHART I WILL TAKE A LOOK AT SECOND AREA POINT 2
HOPE IT MAKE SENSE
SORRY FOR LACK OF ENGLISH

SALIVAN

HI RTM
hi traders
Again i want to say that this thread is not mine ,so that i invite other members of this committee to join me and write their thoughts so we can learn from each other I am no professional just I'm someone who really enjoys looking at the chart and try to find some clues.
At this time i want to continue my investigation in EUR/GBP at point 3
after this i will write some note about another part of the war FL.
so start again in weekly TF to know where is the exact place
I want to investigate point 3:

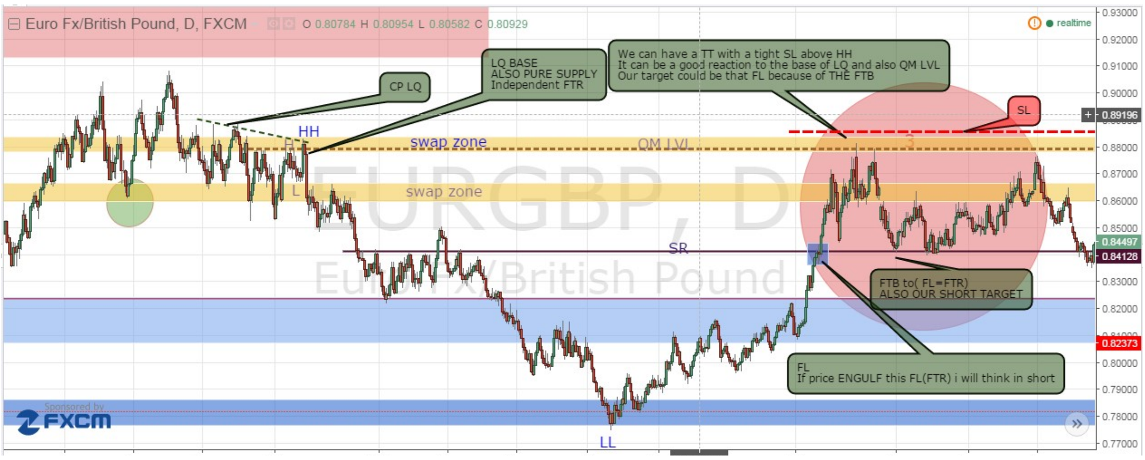

now we can see in DAILY TF

In the next chart i try to show PA in the first part of point 3 :

In next chat i try to make some types of ENG that i call it EN2 .

FIRST OF ALL

if you read my HW ON ENGULF AND FAKE OUT that started by ARON(DT) you will see that i my self act all FTB s as FO .

WHY ???

MOST OF THE TIME a barrier is broken after that price make a FTR (in this case FL , in next post i will try to investigate some kind of FL) after this FTR BB put their orders in that DP that price decided to don't return to the source of ENG .

THIS IS FTB(FIRST TIME BACK TO THE FTR)

These FTBs most the time make FO .Because BB want to hit the buyers SL and also hit and enter the SELL STOPS to make pools of LQ for it self .

In logic & philosophy if a wrong assumption violated then the Opposite is true.in this case if THE FO ENGULFED WE CAN SAY THAT THE FO IT SELF WAS AN ENGULF .

SO that i my self prefer to act all FTBs as FO .and wait for ENG of this FO . that i call it EN2.

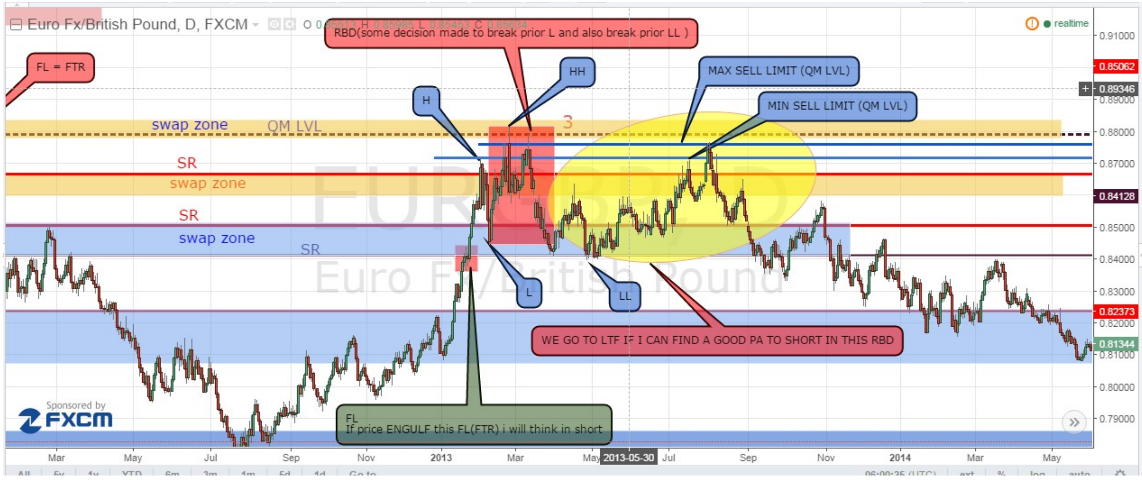

here next chart

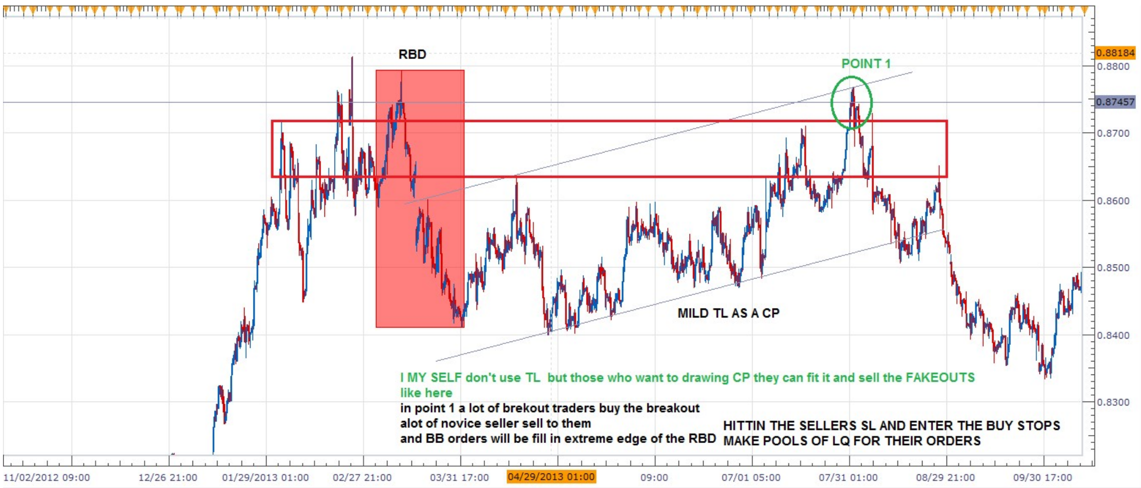

NOW i want to look at the chart in some more details

let take a look at LTF to find proper DP

HOPE IT HELPS.

ANY COMMENTS ARE WELCOME

THANK YOU RTM

hi bro
sorry for late reply
i was reading new thread and continuing my journey
that the castle and fortress have a difference that a fortress is full of castles and any castle have a FL .
if you read all the post above you can understand this
any more if want to tell you is this :

also you can see this chart inGreat IF's journal :

and this one from me to those who want read the chart :

hope it helps you .
bear in mind i am new here and just i want Tell a story in my language
i think i found some thing valuable ,hope i can improve it .

now in live trade how i can use this types of thinking that i learnt from RTM

AT FIRST LET ME WRITE SOME THING IMPORTANT .

i don't have FOREX TESTER but i try to take a one for testing my mind . but i tested this kind of thinking in demo account and live account . be honest with you it was really amazing but i still learning in this academy and sure it will be more Development in future .

the most important part is to find correct THINK TANKS .

in future i try to talk about PAZs that is the space between two fortress .

more thing that i can say is this :

GREAT IF SAYS :

There is absolute order in the market. Nothing at all there happens by chance. That's why it's so easy to read what's going to happen next. There are rules which are strictly followed; so much so you'd imagine it's all run by algorithms, up to the moment when the signal is decided upon, and straight away thereafter. There is zero chaos in the market. It's elegantly designed; a beauty to behold.

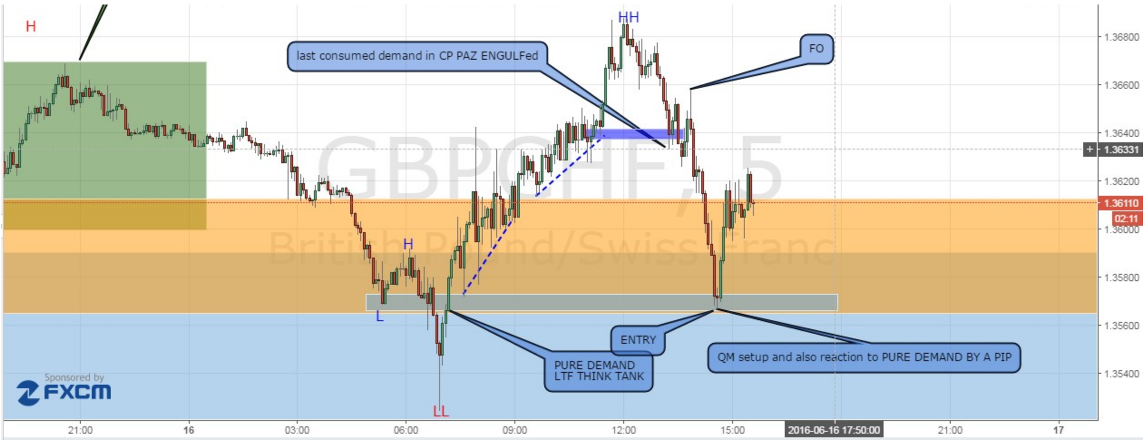

I my self believe that . i think all the thing that i must learn is the concepts behind this golden note by IF

so that lets start :

LTF :

HI BROTHER
if i want to explain it more better and also deeper for a really Honorable friend i must tell read the chart(all concepts of RTM)and also post #10 and #11 and #12 in this thread that i tried to tell all those that i learnt from RTM journey ..
Be sure to tell me if you did not understand the point about that trade .
then i will post it .
but i am sure if you try to investigate this 3 steps you can read the market more easly (IF SAYS : it's really easy to find pockets of orders which will bounce price)
1)why price is here ??
2)where did price come from ??
3) how it came ??
all the story is in price
A BIT HINT FOR MY FRIEND :
in some areas some decision made to what ???
and why ???

this 3 questions will help you alot bro .

i my self asked it more than 1000 times .
and each time i found some thing new
hope it helps you
I AM SURE YOU WILL FIND IT SOONER
but bear in mind that i am also new here like you .

If you could not find the answer of GBP/USD trade it's enough to tell me
with regards

HEY DAN!
look for barriers
look for those decisions that made to break a barrier
look for candle sticks that formed
the candles will talk with you
all the story is in them nut you must diagnose them in right place
i am not a candle stick trader but i read them for knowing the story behind them
why price is here ?
where did it come from ??
how it came ???
which barriers broken in it's way ???
then you can find out why some FL work nicely and why others don't work ?
why some bases break easily and why others are powerful and make good reactions ??
this type of reading the chart will make a lot of EUREKA MOMENTS in you RTM journey
hope it make sense
here is more EXAMPLE :

this was my trade in gold
and on of an other trade in gold that i short it in 1312

if you look in the chart you can see why and how ???

IF we want to predict the right direction of price in future we must read the history of price in a right way .
this helps us a lot to know why and how price turns .
for example :
why CP form and why some CPs are CPLQ ??
there is a logical reason behind price and we must know that the history is more clearer than future .those who read the history in a wrong way say that the market is totally chaos.
if it is chaos why in some points big rally and big drop form ???
why ???
because there are a lot of thinks that are waiting for that DP . AND RTM is one of those methods that show us right DPs and why we should wait for them .with the piece of this puzzle we just see chaos but if we put all this pieces of puzzle together then we see more eureka moments in our journey .
all the market is DP . all the market is FL . but why some make good reaction and others rejected by price ???
there is a reason behind it .

with regards

an other example
why some QMs fail ???
there is a reason behind them , those QMs that fail are incorrect QMs . they are WRONG QMs.
why ???
because of the DPs.
the important remain DPs make the QMs wrong and after that DIAMOND happen. (I haven't read the DIAMOND THREAD yet just i read the first post by IF in that thread and this is what i saw in the chart so that maybe i am WRONG by this and make mistake ,share you think with me)
i don't want to say i am an expert ,no no , just i want to say that there is a reason behind those reactions and others rejections .
HTF zones ,LTF DPs, make deals in the market .
i think that ITs know this QM must be fail and know that the diamond must be happen and their SL in failed QM wont't hit because there is an other correct QM in the way . the only traders that their SL hit (in this case FAILED QMs)are retailers like me .
in following why the num1 QM lvl make reaction and price couldn't reach the second one
look for the most important DPs(THINK TANK) you will find the reason behind it .
hope we can share our knowledge that we learnt from RTM and help each

other here .

with regards

about the diamond that why they happen .
in prior posts i wrote that i don't have FOREX TESTER so that i must test my thinks in LTF .
and here is some DIAMONDS that i predicted before in live trade .
why they happen ???
there are some IMPORTANT DPs(TRUE) that there are a lot of unfilled orders(remained)of BIGBOYS there that make a QM WRONG and a DIAMOND correct one .

hope it makes sense

first one :

result :

second one :

result :

lets start to find the most important DP

here are two DPs
why price react to one an then also react to an other ?

reaction to the first one (lower one) :

reaction to the second one (upper one) :

now why ???

and you can go and see the post #5 in this tread and you will see that i did it in live market .

hope it can help you

with regards

i think these are enough to prove that there is no chaos in the market and all the things planned step by step

and also these are enough for now for me to make examples then i want to continue my wonderful journey in this paradise
hope you can also find some secret of the market and i believe that if no one found it we can do that
just believe this and do the best as you can do .
THANK YOU RTM
THANK YOU IF
